

Agdatahub raises €4.8 million to boost the development of a French and European agricultural infratech in a trusted framework

PRESS RELEASE - Paris, March 2, 2023 - A company founded and co-financed by the agricultural sector since 2020, Agdatahub has completed its second circle of financing. The combined financing by the historic holding company API-Agro, two leading actors in the agricultural and agri-food sectors (Avril and InVivo) and two technology partners (Capgemini and IN Groupe as a specialist in identity and protection of sensitive data), as well as the investment of Banque des Territoires, Agdatahub's historic partner on its own behalf and a new entrant on behalf of the French government within the framework of the program France 2030, will enable Agdatahub to strengthen its role as the leading agricultural data intermediary in France and in Europe. The objective is clear: to amplify the massive use of agricultural data in a sovereign trusted framework.

Agdatahub, 4.8 million euros raised for a shared ambition: to connect 380,000 farms with their 85,000 partners in France

Agdatahub is the first French intermediary platform for agricultural data. Its ambition: to provide the 380,000 farms in France and all the relevant actors in the sector with innovative tools that take into account the consent of farmers to the use of their data.

This ambition is now shared with new partners. In fact, in order to support its development, Agdatahub has raised a new €4.8 million in funding. Avril, InVivo and IN Groupe, a technology partner for the development of digital identities for farmers, have joined the company's capital alongside its historical partners: the agricultural holding company API-Agro and the Banque des Territoires. The fundraising was completed by financing from Capgemini, as well as by the Banque des Territoires, on behalf of the French government. The latter, within the framework of the program France 2030 Territoires d'innovation, awarded two actors, Dijon Métropole and Occitanum, a project coordinated by the Institut National de Recherche pour l'Agriculture, l'Alimentation et l'Environnement (INRAE) centers in Occitanie, Montpellier and Toulouse.

The arrival of these new players and the strengthened commitment of certain historical partners, such as IN Groupe, are in line with Agdatahub's vision and demonstrate the need to structure the circulation of agricultural data, from farm to table. It is essential to reinforce the trust between producers and consumers while responding to current challenges.

Indeed, by bringing together, into one ecosystem, large groups and innovative structures, Agdatahub offers the keys for the digital and agro-ecological transformation of the agricultural sector, in favor of sustainability as well as digital and food sovereignty of France.

Agdatahub, solutions for the massification of uses today

Agdatahub already offers two flagship solutions for the various agricultural sectors and their partners:

- Agritrust: A solution for managing farmers' consent to the use of their data, Agritrust is based on the
 very first agricultural digital identity (developed in co-innovation with Orange Business Services and IN
 Groupe). Focusing on digital service providers for farms and available as a paid subscription, Agritrust is
 also a free mobile application for farmers.
- API-Agro: The first platform for multi-stream agricultural data exchange, API-Agro operates as a trusted third party between holders and users of agricultural data. Launched in 2019, the platform currently has more than 2,000 subscribers. Different subscription formulas (including a first level free of charge) allow the relevant sectorial actors to access its numerous functionalities and to exchange data in complete security and transparency.

These two solutions have been designed to meet the needs of agricultural industry in terms of data dissemination for the purpose of innovations beneficial to the agricultural sector, but also to meet the transparency demanded by consumers, while complying with European regulations on non-personal data (*Data Governance Act*, in force as of September 2023, and *Data Act*, under discussion).

Sébastien WINDSOR, farmer and President of Agdatahub, is pleased that "this consortium of investors, composed by leading actors, is mobilizing to accelerate the controlled circulation of agricultural data and the massive deployment of use cases such as chain traceability, carbon or environmental labelling, which are sources of income improvement for French farmers."

In addition, Agdatahub conducts operational consulting missions as part of its Capdata activity. The aim is to implement concrete use cases of data applied to the sectors. During the International Agricultural Salon (February 25 to March 5), Agdatahub will conduct presentations on its stand; including partners from the wine industry, the carbon economy and the environmental display.

The France 2030 investment plan:

- Sets out a twofold ambition: sustainably transforming key sectors of our economy (health, energy, automotive, aeronautics and space) through technological innovation, and positioning France not only as a player but as a leader in the world of tomorrow. From basic research to the emergence of an idea and the creation of a new product or service, France 2030 supports the entire life cycle of innovation right up to industrialization.
- France 2030 is unprecedented in its scale: €54 billion is being invested so that our businesses, our schools, our universities and our research organizations fully succeed with their transitions in these strategic sectors. The challenge is to enable them to respond in a competitive way to the world's future ecological and attractiveness challenges, and to showcase the future champions of our sectors of excellence. France 2030 is defined by two overarching objectives, which will see 50% of expenses given over to the decarbonization of the economy, and 50% to emerging key players, those at the forefront of innovation, without neglecting the environment (in the sense of the "Do No Significant Harm" principle).
- France 2030 is being implemented collectively: designed and deployed in consultation with economic, academic, local and European key players to establish strategic guidelines and decisive action. Project holders are invited to submit their entries via the current application process, which is a demanding and selective one, to benefit from French government support.
- France 2030 is being led by the French General Secretariat for Investment, in charge of France 2030, on behalf of the Prime Minister, and in partnership with the relevant government ministries. France 2030 is being implemented by the French National Research Agency (ANR), the French Agency for Ecological Transition (ADEME), Bpifrance and the Banque des Territoires.
